## Investment Risks

The Fund will invest in financial instruments whose prices fluctuate and as a result the NAV per unit of the Fund will also fluctuate. **Therefore the invested amount will not be guaranteed and a loss of principal may be caused. All the gains and losses accrued to the trust assets will be attributable to the investors. Investment trusts are not deposits.**  
 Major factors to cause fluctuation of NAV per unit:

1. Stock Price Volatility (Price Volatility Risks, Credit Risks): Stock price changes based on the political and economic conditions, operating results of the issuer, and market supply and demand for the security. If the issuer becomes operationally distressed or goes bankrupt, all or part of invested amount might not be returned. If the price of stocks included in the trust assets falls, the NAV per unit may fall below the invested amount.
2. Other risks: When the trust assets of the Fund are invested in money market instruments such as call loans and/or certificates of deposit, losses may accrue due to default of the issuers of such instruments (the Credit Risk). This may cause the NAV per unit to decline.

The performance of the NAV may not completely match that of the index. The factors to cause fluctuation of NAV per unit are not limited to those mentioned above.

Please read "Investment Risks" in the fund's Prospectus describing in detail.
