Risk and Reward Profile

Lower risk Higher risk
Potentially lower rewards Potentially higher rewards

- The lowest category does not mean a risk free investment.
- The risk and reward profile may change over time.
- Historical data may not be a reliable indication for the future.
- This Fund is in category 6, since the share price has a high volatility, therefore the risk of loss as well as the expected reward can be high.

The following risks may not be fully captured by the risk and reward indicator:

- **Currency Risk:** As the Fund invests in securities denominated in a number of different currencies, movements in exchange rates may, when not

hedged, cause the value of the investments to increase or decrease.

- **Derivative Risk:** Derivative values can rise and fall at a greater rate than equities and debt instruments. Losses can be greater than the initial investment. This risk is minimised by holding a diverse selection of non derivative investments.
- **Equity Risk:** The risk that investments depreciate because of stock market dynamics.
- **Market Risk:** The Fund's assets may decrease because of sovereign acts and political transformation, which may also influence free trade of currency. In addition, risks may arise because of restricted information possibilities in addition to less stringent supervision and control of certain markets. The performance of these markets may be subject to significant volatility.
- **Emerging Market Risk:** The risk that political or economic changes can arise from a period of instability within emerging markets. They can influence the value of investments.

A complete description of risk factors is set out in the Prospectus in the section entitled 'General risk factors'.
